

# Type 9070 Round Coupling Nuts

## NUTS

### TYPE 9070 ROUND COUPLING NUTS

| Nominal Diameter and<br>Thread Pitch | Part Number | D2               | H      |
|--------------------------------------|-------------|------------------|--------|
|                                      |             | Outside Diameter | Length |
|                                      |             | Ref              | Max    |
| M6 - 1.0                             | M620RNCUPA2 | 10               | 20     |
| M6 - 1.0                             | M625RNCUPA2 | 10               | 25     |
| M6 - 1.0                             | M630RNCUPA2 | 10               | 30     |

|                                     |                                                                                                                                                                                                                                                               |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Description</b>                  | A cylindrical mechanical device that is completely threaded internally, from one end through to the opposite end. Round coupling nuts are less common than hex couplings.                                                                                     |
| <b>Applications/<br/>Advantages</b> | Used to join two externally threaded parts of equal thread diameter and pitch, often two pieces of stainless steel threaded rod. They are used when wrenching is not required and a smooth, outer appearance is preferred. Also referred to as rod couplings. |
| <b>Material</b>                     | A2 Stainless Steel                                                                                                                                                                                                                                            |
| <b>Plating</b>                      | Stainless coupling nuts are typically supplied without any additional finish.                                                                                                                                                                                 |
