<b>Description</b>	An unslotted hex head tapping screw with a conical flange and free spinning, captive rubber washer. The underside of the flange is undercut, creating a space for the rubber washer to be seated. Screw has spaced threads and a drill point which drills its own hole.
<b>Applications/ Advantages</b>	When properly installed, this fastener: (a) offers protection against leakage, and (b) minimizes damage to the mating surface caused by contact with a steel washer. Sealing screws may be used to attach roofing or metal walls to steel frames. Ruspert finish makes these screws a more economical option than stainless for resisting corrosion. Consult a self-drilling screw selection chart for the correct size.
<b>Material</b>	<i>Screw:</i> AISI 1016-1024 or equivalent steel; <i>Rubber washer:</i> Style 40 EPDM sheet
<b>Heat Treatment</b>	Screws shall be quenched in liquid and then tempered by reheating to 625°F minimum.
<b>Case Hardness</b>	<i>Screw:</i> Rockwell C52 -58 <i>Rubber Washer:</i> Shore A 65 - 75 (Durometer scale)
<b>Case Depth of Screw</b>	<i>No. 10 &amp; 12 diameters:</i> .004 - .009 <i>1/4" diameter and larger:</i> .005 - .011
<b>Core Hardness of Screw</b>	Rockwell C32 - 40 (after tempering)
<b>Plating</b>	Screws typically have a Silver Ruspert finish with a 1,000-hour salt-spray rating for resisting red rust.
